End-to-end visual overview

01

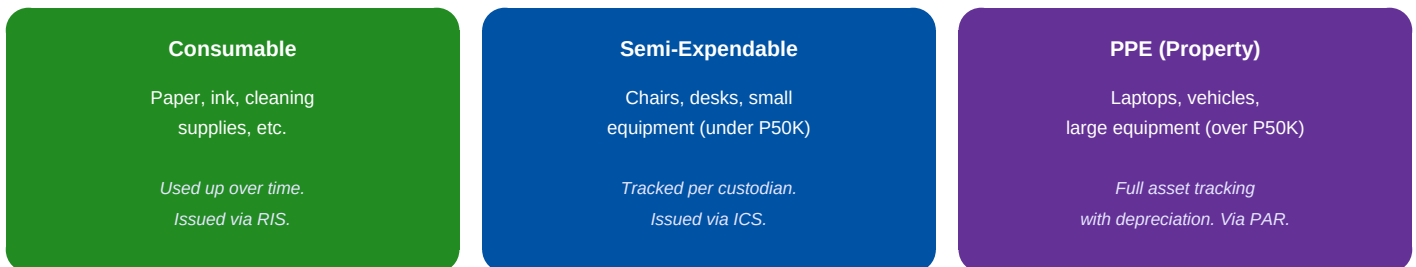

The Big Picture

How inventory, assets, and requests connect

After items are delivered and inspected, they enter the Inventory & Assets module. This module tracks everything from consumable supplies to high-value property:

Three Types of Items:

KEY POINT

As an End User, you mainly interact with Supply Requests (RIS) to get supplies, and sign ICS/PAR documents when property is assigned to you. Inventory management is handled by the Supply Officer.

02

Who Does What?

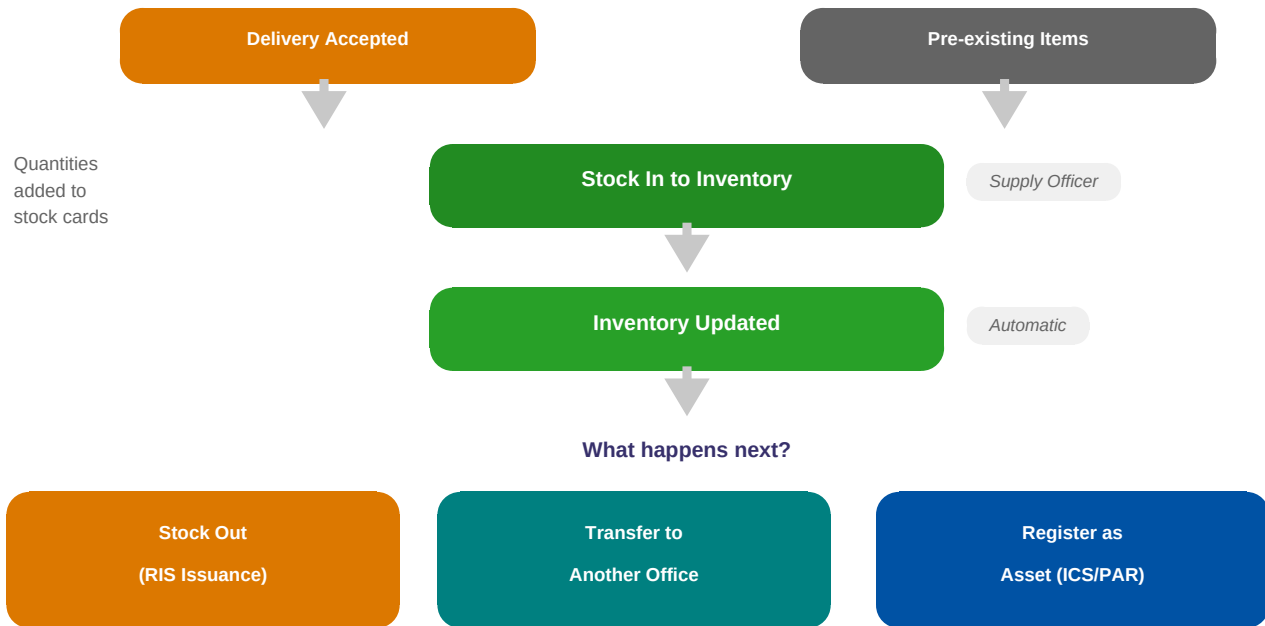

Roles in inventory and asset management

03

Inventory Flow

How items enter and leave your inventory

PHYSICAL COUNTING

Periodically, the Supply Officer counts actual items and compares with system records. Any difference creates an automatic adjustment. Reorder alerts fire when stock drops below the set point.

Inventory Steps Explained

1

Stock In (From Delivery)

Supply Officer

After delivery passes inspection, the Supply Officer clicks 'Stock In'. The system automatically creates item catalog entries (if new items) and adds quantities to inventory. Each stock-in is recorded as an immutable ledger entry for audit.

2

Stock In (Manual)

Supply Officer

For pre-existing items not from deliveries (e.g., items before the system was deployed), the Supply Officer can manually add stock. Requires item catalog entry, office, and quantity.

3

Stock Out (Issuance)

Supply Officer

When a supply request (RIS) is approved and fulfilled, items are issued from stock. The system deducts the quantity and records the movement. Stock cannot go below zero.

4

Physical Count

Supply Officer

The Supply Officer counts actual items on hand and enters the count. If there's a difference from the system, an automatic adjustment is created. Updates last count date.

5

Reorder Alerts

Automatic

When stock drops to or below the reorder point, the system automatically notifies users with inventory management permission. Helps prevent stockouts.

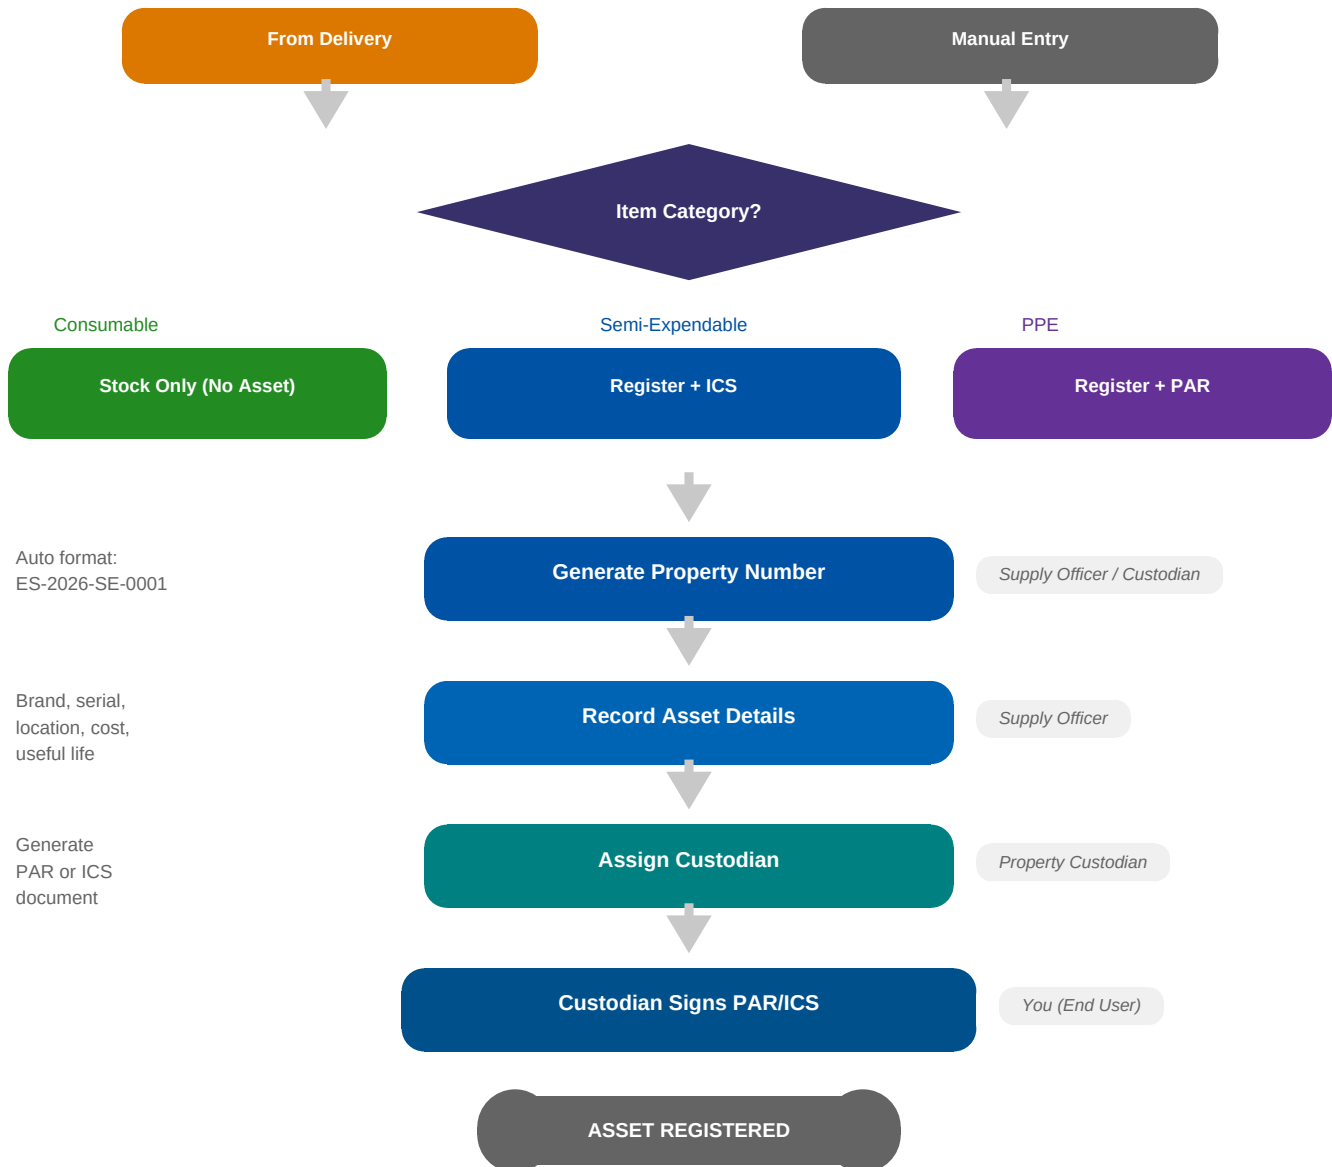

IMMUTABLE LEDGER

Every stock movement (in, out, adjustment, transfer) is permanently recorded and cannot be edited or deleted. This is an accounting principle for COA audit compliance. Corrections are made through new adjustment entries.

04

Asset Registration

From delivery to property number

Asset Registration Steps Explained

1

Identify Asset Type

Supply Officer

The system checks the item catalog category. Consumables just stay in inventory. Semi-expendable items (under P50,000) get an ICS. PPE items (over P50,000) get a PAR. Only semi-expendable and PPE items become registered assets.

2

Generate Property Number

System

Each asset gets a unique property number: {OFFICE}-{YEAR}-{SE or PPE}-{NNNN}. Example: ES-2026-SE-0001 for a semi-expendable item in Elementary School. This number is permanent and used for all tracking.

3

Record Details

Supply Officer

Enter brand/model, serial number, location, acquisition cost, useful life years, and residual value (for PPE depreciation). The source PO and delivery are linked for full traceability.

4

Assign Custodian

Property Custodian

The asset is assigned to a person (custodian) who becomes responsible for it. A PAR or ICS document number is generated automatically. The custodian gets a notification that an asset has been assigned to them.

5

You Sign the Document

You (End User)

As the custodian, you sign the PAR or ICS acknowledging custody. You are now responsible for the item until you return or transfer it. The asset appears in your 'My Assets' list.

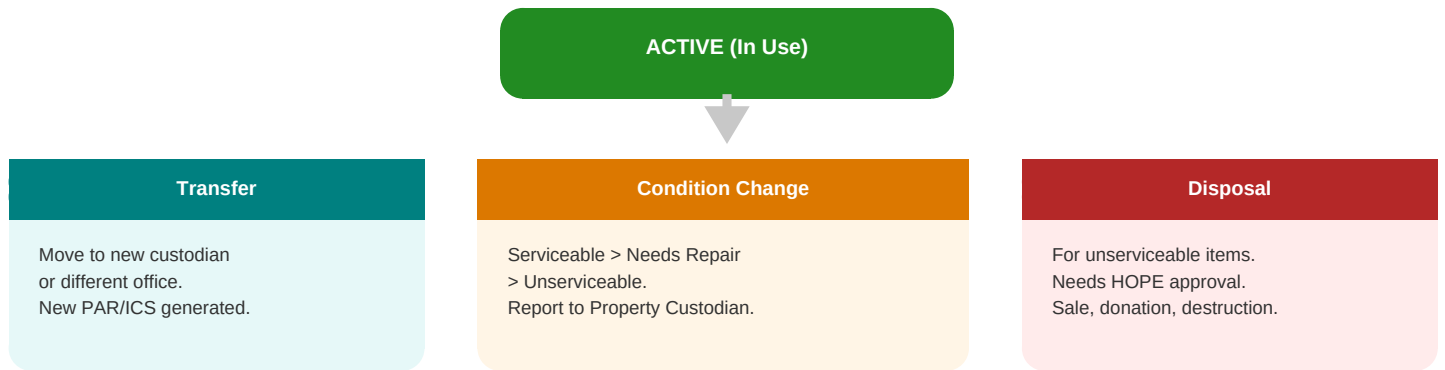

PROPERTY NUMBER FORMAT

Property numbers follow the pattern: OFFICE-YEAR-TYPE-NUMBER. Example: ES-2026-PPE-0001 (Elementary School, 2026, Property Plant & Equipment, #1). ICS documents are numbered ICS-ES-2026-0001. PAR documents: PAR-ES-2026-0001.

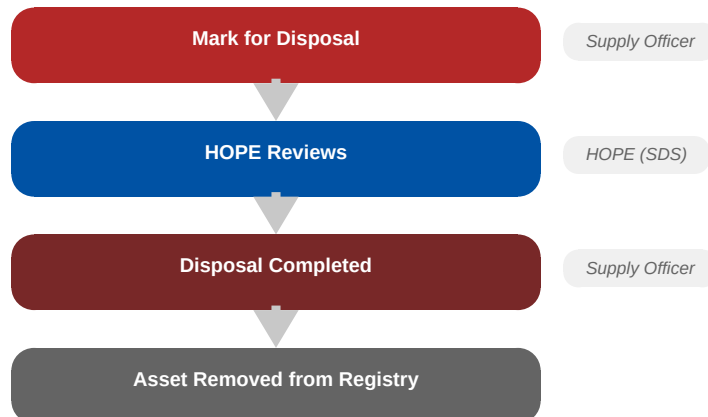

05

Asset Lifecycle

Transfer, condition tracking, and disposal

Disposal Flowchart

DEPRECIATION (PPE Only)

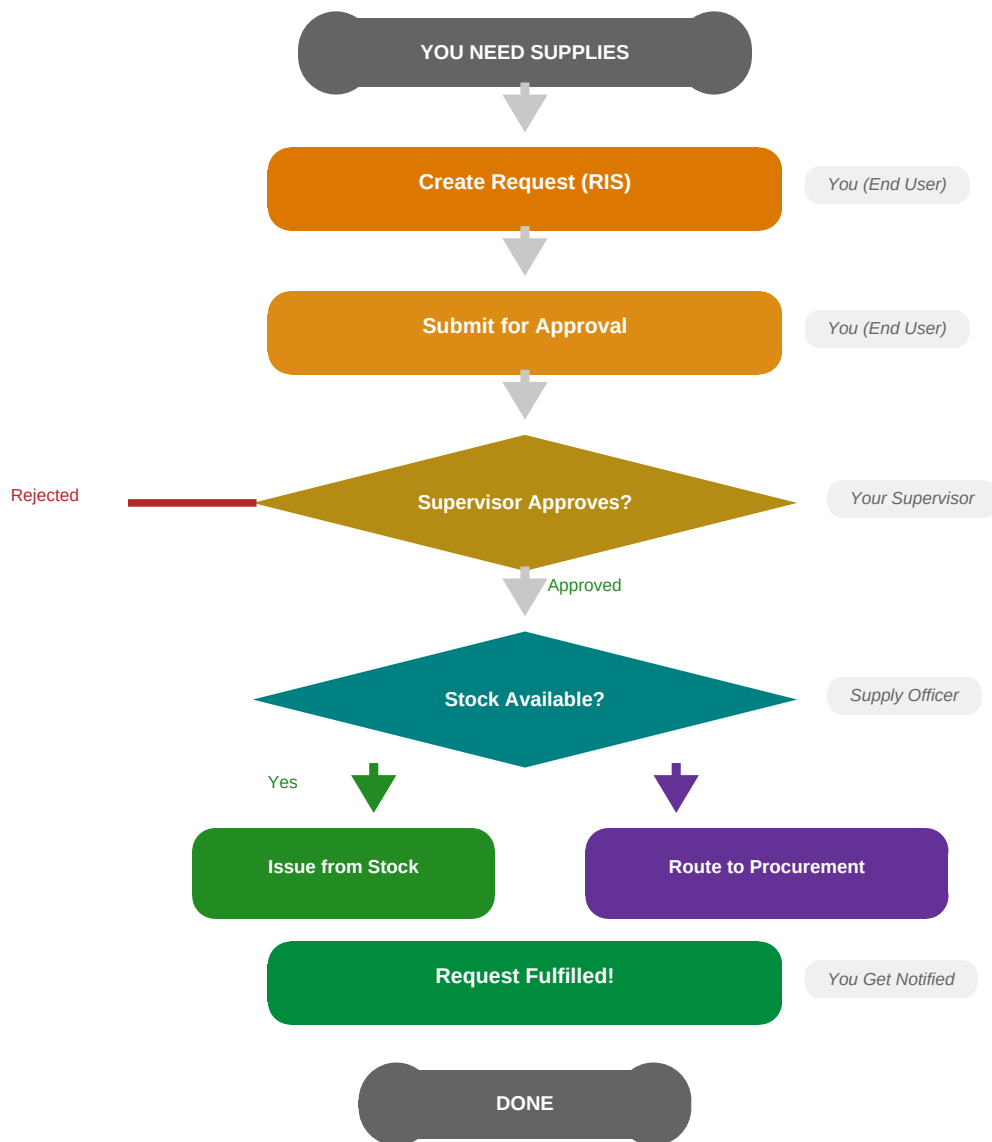

PPE assets lose value over time (straight-line method). Monthly depreciation = $(\text{Cost} - \text{Residual Value}) / (\text{Life Years} \times 12)$. The Accountant runs monthly batch depreciation. Book value is tracked until it reaches residual value. Semi-expendable items do NOT depreciate.

06

Supply Requests (RIS)

How to request and receive supplies

Select items,
set quantities,
state purpose

Supply Request Steps Explained

1

Create Request (Draft)

You (End User)

Go to Requests > New. Select request type (Supply, Equipment, Service, or Procurement). Pick items from the catalog, set quantities, write a purpose, and choose urgency level (low, normal, high, emergency). Save as draft anytime.

2

Submit for Approval

You (End User)

Click Submit. The system auto-detects your supervisor (School Head, Section Chief, or Division Chief based on your office). Your request number is generated: REQ-ES-2026-0042.

3

Supervisor Approves

Supervisor

Your supervisor reviews the request and either Approves or Rejects with a reason. If rejected, you'll get a notification explaining why. If approved, the Supply Officer is notified to process it.

4

Supply Officer Processes

Supply Officer

The Supply Officer checks stock availability. If items are in stock, they issue directly (creating stock-out movements). If not, they route your request to procurement (creating a PR automatically). Mixed fulfillment is also possible.

5

You Receive Items

You (End User)

You get a notification when your request is fulfilled. For stock items, you receive them with a RIS document. For procurement items, a PR is created and you'll be notified as it progresses through the procurement workflow.

REQUEST TYPES

Supply (consumables via RIS), Equipment (durable items), Service (maintenance/repair), Procurement (items not in stock, routed to PR creation). Most common is Supply.

07

Key Documents

ICS, PAR, and RIS explained

RIS

Requisition & Issue Slip

When you receive consumable supplies (paper, ink, cleaning items), you get a RIS. It records what was issued, how many, and from which inventory. The RIS is your receipt proving you received the items.

When: Consumable supplies issued from stock
Number format: Generated with request number
Your role: Receive items and acknowledge

ICS

Inventory Custodian Slip

For semi-expendable items (chairs, desks, small equipment under P50,000), you sign an ICS acknowledging custody. You are responsible for the item until you return or transfer it. The ICS tracks the chain of custody.

When: Semi-expendable asset assigned to you
Number format: ICS-{OFFICE}-{YEAR}-{NNNN}
Your role: Sign as custodian, care for item

PAR

Property Acknowledgment Receipt

For PPE items (laptops, vehicles, large equipment over P50,000), you sign a PAR. The item gets a property number, is tracked for depreciation, and appears in the official government asset registry. PAR is the most formal custody document.

When: PPE asset assigned to you
Number format: PAR-{OFFICE}-{YEAR}-{NNNN}
Your role: Sign as accountable officer

YOUR RESPONSIBILITY

When you sign an ICS or PAR, you become legally accountable for the item. Report damage, loss, or any issues to the Property Custodian immediately. All custody changes are logged for COA audit.

08

Complete Flowchart

End-to-end: Inventory, assets, and requests

The Complete Journey:

Delivery >> Stock In >> Register Asset >> Assign Custodian >> PAR/ICS >> Track & Maintain >> Request Supplies >> Issue

Quick Tips & Reminders

When Requesting Supplies

- Check if the item is in the catalog before requesting.
- Be specific about quantities and purpose.
- Choose the right urgency level -- Emergency is for real emergencies.
- Track your request status in the dashboard.

When You Receive an Asset

- Review the PAR/ICS details before signing.
- Note the property number -- you'll need it for any future reports.
- Keep the asset in the assigned location.
- Report any issues (damage, defects) immediately.

As a Custodian

- You are legally accountable for items under your custody.
- Request a transfer if you're moving to another office.
- Report lost or stolen items to the Property Custodian right away.
- Return items properly when no longer needed.

For Audit Compliance

- All stock movements are permanently recorded (immutable ledger).
- Physical counts should match system records.
- PAR/ICS documents are official government records.
- Depreciation runs monthly for PPE -- check with your Accountant.

Glossary

RIS	Requisition & Issue Slip -- receipt when consumable supplies are issued to you.
ICS	Inventory Custodian Slip -- custody document for semi-expendable items (under P50K).
PAR	Property Acknowledgment Receipt -- custody document for PPE items (over P50K).
PPE	Property, Plant & Equipment -- high-value assets tracked with depreciation.
Consumable	Items used up over time (paper, ink, cleaning supplies). Tracked by quantity.
Semi-Expendable	Durable items under P50,000 (chairs, small equipment). Tracked per person.
Property Number	Unique ID for each registered asset: OFFICE-YEAR-TYPE-NUMBER.
Custodian	The person legally responsible for an asset under their custody.
Stock Movement	Any change in inventory: stock-in, stock-out, adjustment, or transfer.
Reorder Point	Minimum stock level that triggers a low-stock alert.
Physical Count	Manual counting of actual items to verify system records.
Depreciation	Monthly reduction in asset value (PPE only). Straight-line method.
Book Value	Current value of asset = Acquisition Cost - Accumulated Depreciation.
Residual Value	Estimated value of asset at end of useful life.
Disposal	Official process to remove unserviceable assets from the registry.
COA	Commission on Audit -- government auditing body that reviews all records.
Immutable Ledger	Stock movements that cannot be edited/deleted -- for audit compliance.
