01

The Big Picture

How fuel inventory and trip tickets work together

The Fuel Module manages your division's fuel supply and trip tickets. It tracks how much fuel is available (with cost per liter), who requests it, and uses FIFO (First-In, First-Out) to consume the oldest stock first -- just like a real fuel depot.

How it flows:

WHAT'S NEW: FIFO & PRICE TRACKING

Each fuel stock-in now records the price per liter and optional PO number. When fuel is approved, the system depletes from the OLDEST batch first (FIFO), tracking remaining liters per batch for accurate cost accounting.

02

Who Does What?

Roles in fuel management

FUEL MANAGER ROLE

The Fuel Manager is an office-level role for fuel management. They approve requests, manage inventory with cost tracking, and get notified on every new trip ticket.

03

Fuel Inventory & FIFO

Stock-in with price tracking and batch management

Fuel type, office,
liters, price/L,
PO number

FIFO batch:
remaining = full
quantity

HOW FIFO BATCH TRACKING WORKS

Each stock-in creates a 'batch' with remaining_liters equal to the quantity added. When a fuel request is approved, the system automatically depletes from the OLDEST batch first (First-In, First-Out), just like a real fuel depot:

Example: Batch 1 (100L remaining) + Batch 2 (200L remaining). A 150L request depletes all 100L from Batch 1, then 50L from Batch 2. Batch 2 now has 150L remaining.

Stock-In Details:

Price per Liter	PO Reference	Reorder Alert
Record the cost of each fuel delivery for accurate budget tracking.	Link stock-in to a Purchase Order number for audit traceability.	Auto-notification when fuel drops below the configured reorder point.

FUEL TYPES

Your division can configure multiple fuel types (Diesel, Gasoline, Premium). Each type is tracked separately per office with its own stock level, price history, and reorder point.

04

Trip Ticket Request

How to request fuel for your official trip

When you need fuel for an official vehicle trip, submit a Trip Ticket. Here's what you need to provide:

Request Flowchart:

05

Approval & Dispensing

How requests get approved with FIFO depletion

1

You Submit Trip Ticket

You (End User)

Fill out trip date, destination, purpose, vehicle info, passengers, fuel type, and liters needed. Click Submit. Your FTT number is auto-generated. The Fuel Manager and Supply Officer are notified.

2

Fuel Manager Reviews

Fuel Manager

The Fuel Manager sees your request in 'Pending Approval'. They can approve (optionally reducing liters), reject with a reason, or let it sit. They verify the trip is justified and stock is sufficient.

3

FIFO Depletion on Approval

Automatic

When approved, the system depletes fuel from the OLDEST stock-in batch first (FIFO). If Batch 1 doesn't have enough, it moves to Batch 2, and so on. Each batch's remaining_liters is updated. A stock-out movement is logged.

4

Dispensing: Fuel Given

Fuel Manager

The Fuel Manager marks 'Dispensed' when you physically receive the fuel. This is the final status. The dispensed timestamp is recorded.

5

Print Your Voucher

You (End User)

After approval, print your Fuel Voucher Slip from the request detail page. This is your official document. You can also print a Trip Ticket form.

WHAT IF REJECTED?

If rejected, you get a notification with the reason. Create a new request with corrections. Rejected requests don't affect fuel stock. You can cancel pending requests before review.

Request Status Summary:

Pending	Waiting for Fuel Manager to review	<i>You submitted</i>
Approved	FIFO depleted, fuel deducted, ready for dispensing	<i>Manager approved</i>
Dispensed	Fuel physically given to you (final)	<i>Fuel given</i>
Rejected	Request denied with reason	<i>Manager rejected</i>
Cancelled	You cancelled before approval	<i>You cancelled</i>

06

Complete Flowchart

End-to-end: Fuel stock to trip completion

The Complete Journey:

Fuel Stocked (with price) >> Trip Ticket >> Approved >> FIFO Depletes >> Dispensed >> Voucher >> Trip!

Quick Tips & Reminders

Before Submitting a Trip Ticket

- Know your trip date, destination, and purpose.
- Check which vehicle you'll use and its plate number.
- List all passengers (name and position) if applicable.
- Request only the liters you actually need for the trip.

While Waiting for Approval

- Watch for notification badges on your sidebar.
- You can cancel your request if plans change (before approval only).
- Track your request status in Fuel > Requests > My Requests.
- If rejected, read the reason and submit a corrected request.

After Approval

- Print your Fuel Voucher Slip from the request detail page.
- Get your fuel dispensed by the Fuel Manager.
- Keep the voucher for your records.
- All fuel transactions are logged with FIFO cost tracking for COA audit.

For Fuel Managers / Supply Officers

- Record price per liter and PO number on every stock-in.
- The system uses FIFO: oldest batch is consumed first automatically.
- Monitor remaining_liters per batch to track cost per consumption.
- Set reorder points to get low-stock alerts before running out.

Glossary

FTT	Fuel Trip Ticket -- the request number format (e.g., FTT-ES-2026-0001).
Trip Ticket	Your official request for fuel for a vehicle trip.
FIFO	First-In, First-Out -- oldest fuel batch is consumed first on approval.
Batch	A stock-in entry with its own remaining_liters and price_per_liter.
Fuel Manager	Office role that approves/rejects fuel requests and manages stock.
Stock-In	Adding fuel to inventory with price per liter and optional PO reference.
Stock-Out	Fuel deducted from inventory via FIFO on request approval.
Price per Liter	Cost recorded at stock-in time for budget and cost tracking.
PO Number	Purchase Order reference linked to the fuel stock-in for audit trail.
Remaining Liters	How much fuel is left in a specific stock-in batch (FIFO tracking).
Adjustment	Correcting fuel inventory to match actual physical count.
Dispensing	Physically giving the approved fuel to the requester.
Voucher Slip	Printable document proving your approved fuel request.
Reorder Point	Minimum fuel level that triggers a low-stock alert.
Fuel Type	Categories like Diesel, Gasoline, Premium -- tracked separately.
Immutable Ledger	Fuel movements that cannot be edited/deleted -- for audit.
COA	Commission on Audit -- government body that reviews all records.
